

GOTHIC2

# HELP IMPROVE TREATMENT FOR CLOZAPINE-INDUCED HYPERMOTILITY

**Do you have drooling because  
of taking clozapine?**

**Joining our clinical trial could  
contribute to developing  
better treatment for this  
distressing condition.**

## **Can you help?**

**We invite women and men who are affected by drooling because of clozapine to take part in a 12-week trial of medication (this could be either hyoscine, glycopyrrolate or a dummy tablet). Your help will contribute to better evidence for an effective treatment for drooling.**

### **To find out more:**

- » Read the GOTHIC2 leaflet
- » Tell the clinic staff that you would like to hear more about the GOTHIC2 trial
